
Test split, attacked windows after Amendment 1 (A1 n = 42, A2 n = 253, A3 n = 98 before NaN pairing). Whiskers: 95% bootstrap CI (stratified by domain). For A3 the claim is the real direction, so DSS > 0 = pushed further in it.
M5 skeptical prompt, A2: the mean (−0.11) and the long whisker come from one window where the model copied the report's 2,730.6 billion; without it +0.48.
